reduce risk
and get back
on the job.**

What Is Rapid Hazard Management?

What if you could control and manage workplace hazards more efficiently from any computer with internet access? You can with Rapid Hazard Management from Rapid Global.

Rapid Hazard Management is an online, fully hosted system for the management of the hazards in the workplace. Providing a reporting mechanism for all hazard types, the system allows anyone from within the business to report a hazard. From investigation, to control measures, to ongoing assessment and reporting on statistics, Rapid Hazard Management ensures the lifecycle of the hazard is documented and controlled to reduce risk.

Rapid Hazard Management is ideal for businesses looking for a proactive solution to manage risk within the workplace. Able to include a variety of hazard types and full customisation, this online software ensures hazards are more easily identified, reported, and controlled, and the risk level reduced.

If your business is serious about the control of hazards, then Rapid Hazard Management is the online software solution for you.

Some of Australia's biggest companies like Allied Mills, Australian Camp Services and Metromix already rely on Rapid Hazard Management to report and investigate hazards, implement control measures and generate ongoing assessments. Companies in all industries and fields will benefit from this software, whether your industry is high-risk such as construction, transport or manufacturing, Rapid Hazard Management is fully customisable for any category of industry.

Rapid Hazard Management is simply the most efficient way of reporting and managing hazards, improving safety, reducing risk and getting your people back on the job safely.

What Makes Rapid Hazard Management Different?

Rapid Hazard Management is simple to use. The system uses dynamic reporting and allows customisation to fit any client or industry. You can even change the language or descriptions used to suit your business and integrate the system into existing risk matrices and hazard types.

Rapid Hazard Management doesn't just record the hazard. It ensures your team applies the correct measures to control the hazard, re-assess the hazard periodically and reduce risks in your workplace.

How Rapid Hazard Management Works

Hazards are able to be reported online by anyone within the workforce. Using an intuitive online form, the system provides a fail safe way of ensuring all aspects of the hazard report are fully completed and submitted. Auto notifications are sent to relevant personnel within the business according to hazard type or location. A team is then assigned to assess the hazard. Control measures are determined and allocated to various personnel according to the hierarchy of control. Once all control measures are complete the hazard can be assessed for risk level adjustment and regular re-assessment of the hazard can occur. The system also includes the ability to track due dates and alert users if hazards have not been closed or need to be periodically re-assessed.

Features

- Easy online access from any computer with Internet access.
- Users can be assigned different access depending on their role.
- The system can be used to record all aspects of the hazard.
- Hazard types are adjustable and customisable in line with your current organisation's procedures.
- Has the ability to attach photos, documentation and interview records.
- Notifications are escalated according to hazard type and organisational structure.
- The life cycle of a hazard includes:

- Provides interactive reporting for live presentations.
- Has the ability to export data to Microsoft Excel.
- Contains both information & data security.
- 1800 number phone support for contractors and administrators.
- Provides ongoing training and technical support for administrators.
- Includes a customised login page.
- Provides full implementation support.

Generates hazard control data for management purposes.

Main Benefits

- Replaces existing Excel sheet reporting systems.
- Ensures all hazards are assessed and control measures applied to reduce the risk rating/score.
- Provides excellent accessibility to be able to report a hazard for all workers and report hazards from any computer or device with internet access.
- Allows for customisation of hazard types, with the form automatically displaying only the relevant sections to the person reporting the hazard.
- Create custom, board ready reports – displaying hazard types, department statistics, risk scores etc.
- Provides access to transparent hazard control data for management and responsible persons.

Designed to Integrate

Integration with your existing systems or third party software is available. Rapid Hazard Management can also be combined with other Rapid Global software solutions to create greater efficiencies and perform related tasks:

Rapid Incident Reporting software ensures incidents are reported, investigated and corrective actions applied.

Rapid Induct software allows inductions to be completed prior to arrival. Ensure workers are aware of hazards before they start work.

Rapid Contractor Management software eliminates the hazard of non-compliant or non-insured contractors working at your sites. Documents collected in Rapid Contractor Management are tracked for variables like expiry and displayed on terminal screens on site. If a document such as company licence is out of date, then access to site is denied.

Rapid Permit To Work software allows contractors to request permits online prior to arrival on site and then displays permits when signing in to terminal on site.

Ask us how Rapid Global can tailor a custom package from our suite of complementary products.
